

Julian Camilo Carvajal Mejia

Popayán, Cauca, Colombia (Remote)

Email: jucarvajal2000@gmail.com

Professional Summary

Motivated and detail-oriented Full Stack Developer with solid knowledge of JavaScript, React, and Node.js. Currently pursuing a degree in Systems Engineering, I have developed academic projects using modern technologies such as the MERN stack and Django, with a strong interest in building scalable and user-focused web applications. I am eager to grow professionally in a collaborative, agile environment and contribute to innovative software solutions.

Technical Skills

- Frontend: React.js, JavaScript (ES6+), HTML5, CSS3
- Backend: Node.js, Express.js, Django
- Databases: MongoDB, PostgreSQL (basic)
- Tools & DevOps: Git, Docker, npm, VS Code
- Other: RESTful APIs, Agile methodologies, teamwork, problem-solving

Education

Systems Engineering (B.Sc.)

Universidad del Cauca — Popayán, Colombia

(Expected graduation: 2026)

Terra-Smart — Smart Soil Monitoring Platform

Jan 2025 – Jun 2025 (6 months)

- Developed a smart web platform for monitoring soil parameters such as nitrogen, phosphorus, potassium, pH, and humidity.
- Implemented Machine Learning models (Random Forest) to generate automatic fertilization recommendations.
- Built backend services using Node.js and integrated data from IoT devices and uploaded files.
- Developed the frontend using React, enabling real-time visualization of soil data.
- Worked under agile methodology as Scrum Master and Developer.
- Project developed in collaboration with PhantomSecure for the client SumoThings as part of an academic research project.

Technologies: React, Node.js, Python, Machine Learning, Docker, REST APIs.

IoT Security Startup — Prototype Development

Jul 2025 – Dec 2025 (6 months)

- Designed and implemented a prototype focused on improving security in IoT environments.
- Developed backend services using Node.js to manage device communication and authentication.
- Applied containerization using Docker for secure and scalable deployment.
- Participated in system architecture design with emphasis on data protection and scalability.
- Worked with REST APIs and secure communication principles for IoT devices.

Technologies: Node.js, Docker, REST APIs, IoT Architecture, Cybersecurity

MyBill — Financial Risk & Billing Management System

2025

- Developed backend services for a financial platform focused on billing and risk analysis.
- Implemented RESTful APIs using Java (Spring Boot) for handling financial data and calculations.
- Worked with DTOs, validations, and business logic related to financial indicators.
- Participated in debugging, testing, and integration of services within a microservices-oriented architecture.

Technologies: Java, Spring Boot, PostgreSQL, REST APIs, Git

Mobile Development Projects (Academic)

- Developed mobile applications using React Native for academic purposes.
- Implemented navigation, forms, API consumption, and responsive mobile interfaces.
- Focused on usability, performance, and mobile-first design principles.

Technologies: React Native, JavaScript, REST APIs

Additional Information

Languages: Spanish (native), English (intermediate–advanced)

Availability: Remote or hybrid positions

Soft Skills: Communication, adaptability, teamwork, continuous learning

Career Objective

To join a forward-thinking company as a Junior Full Stack Developer, where I can apply my technical knowledge, learn from experienced engineers, and contribute to building innovative and impactful software products.
